

# The Original Forests of Vermont

*P. Lucy Braun*

Figure 3. Percentage pollen diagram from Brownington Pond. The pollen percentages are calculated as percent total terrestrial plant pollen. To the left of the diagram, classic pollen zone designations are shown. The lower half of Zone A could be designated "Spruce Pollen Zone," the upper half "Spruce Pollen Zone," as defined by E. S. Deevey, G. B. Deevey, R. H. Davis, and others.

[between Guilford and Whitingham VT} “The land mountainous... the timber it produces beech, Maple, Hemlock, & Some Chestnut... exceeding good and covered with Beech, Maple, Chestnut &c. ... the Pigeon’s nests were so thick that 500 might have been told on the beech (&) Hemlocks as well.”

1741 —Richard Hazzen

in Norbury NY (now Cabot VT) “ choice land timbered with maple, beech, bass, some elm, ash and birch & in patches some few butternuts, with Maidenhair and some nettles”

1773 --Samuel Gale

... the Green Mountains, covered with dense forests; ... swampy in the valleys,  
... [The] toilsome journey was increased by the gloom of the forest and by the disagreeable smell of the swamps. Mushrooms, moss and similar vegetation grow in great abundance. Often large fallen trunks are so rotten they collapse under the weight of one person. The darkness of the woods, where the sun's rays rarely penetrate, is sometimes such that a very large tree falls of its own weight, tearing up all its roots. The ground, which has never been cultivated, is virtually impenetrable beneath the shallow layer of humus,...

1785 --Luigi Castiglioni, between Cavendish and Shrewsbury, Vermont

{between Fairhaven and Rutland}. "The timber here is chiefly Hemlock--Pine--Spruce--Beech--Poplar--Sugar Maple, &c-- no Oak." and later on Pico Peak VT "the Hemlock & Spruce towards the top of a cripplly growth, being depressed by heavy snows & cold & very difficulte to come through."

1807 --Frederick Pursh

“... a difficulty arose in my mind, for my object was to sell out of Mansfield and if possible get the ninety pounds for the survey. A great proportion of the corners of said lots were made on spruce or of fir timber, and if I described them as such, it would show the poorness of the town. In my survey bills, I called spruce and fir gumwood, a name not known to the people of Sharon [Connecticut, proprietors]”...

1773 Ira Allen, *Autobiography*

Hemlock

Northern red oak

Ash

Aspen

A photograph of a dense forest with tall, thin trees and a rocky foreground. The trees are mostly bare, suggesting late autumn or winter. The foreground is a rocky outcrop covered in fallen leaves and pine needles. The background shows a hazy, mountainous landscape.

This is the forest primeval. The murmuring pines and the hemlocks  
Bearded with moss, and in garments green, indistinct in the twilight  
Stand like Druids of old, with voices sad and prophetic

...

Henry W. Longfellow *Evangeline/ A Tale of Acadie*

This is the forest primeval.

...+1200 lines...

Still stands the forest primeval; but under the shade of its branches  
Dwells another race, with other customs and language.

-- Henry W. Longfellow *Evangeline/ A Tale of Acadie*
