

Urban Tree Inventory 2022 Edition

Joanne Garton, Technical Assistance Coordinator

Vermont Urban & Community Forestry Program
Vermont Department of Forests, Parks & Recreation

Urban Forestry in the United States

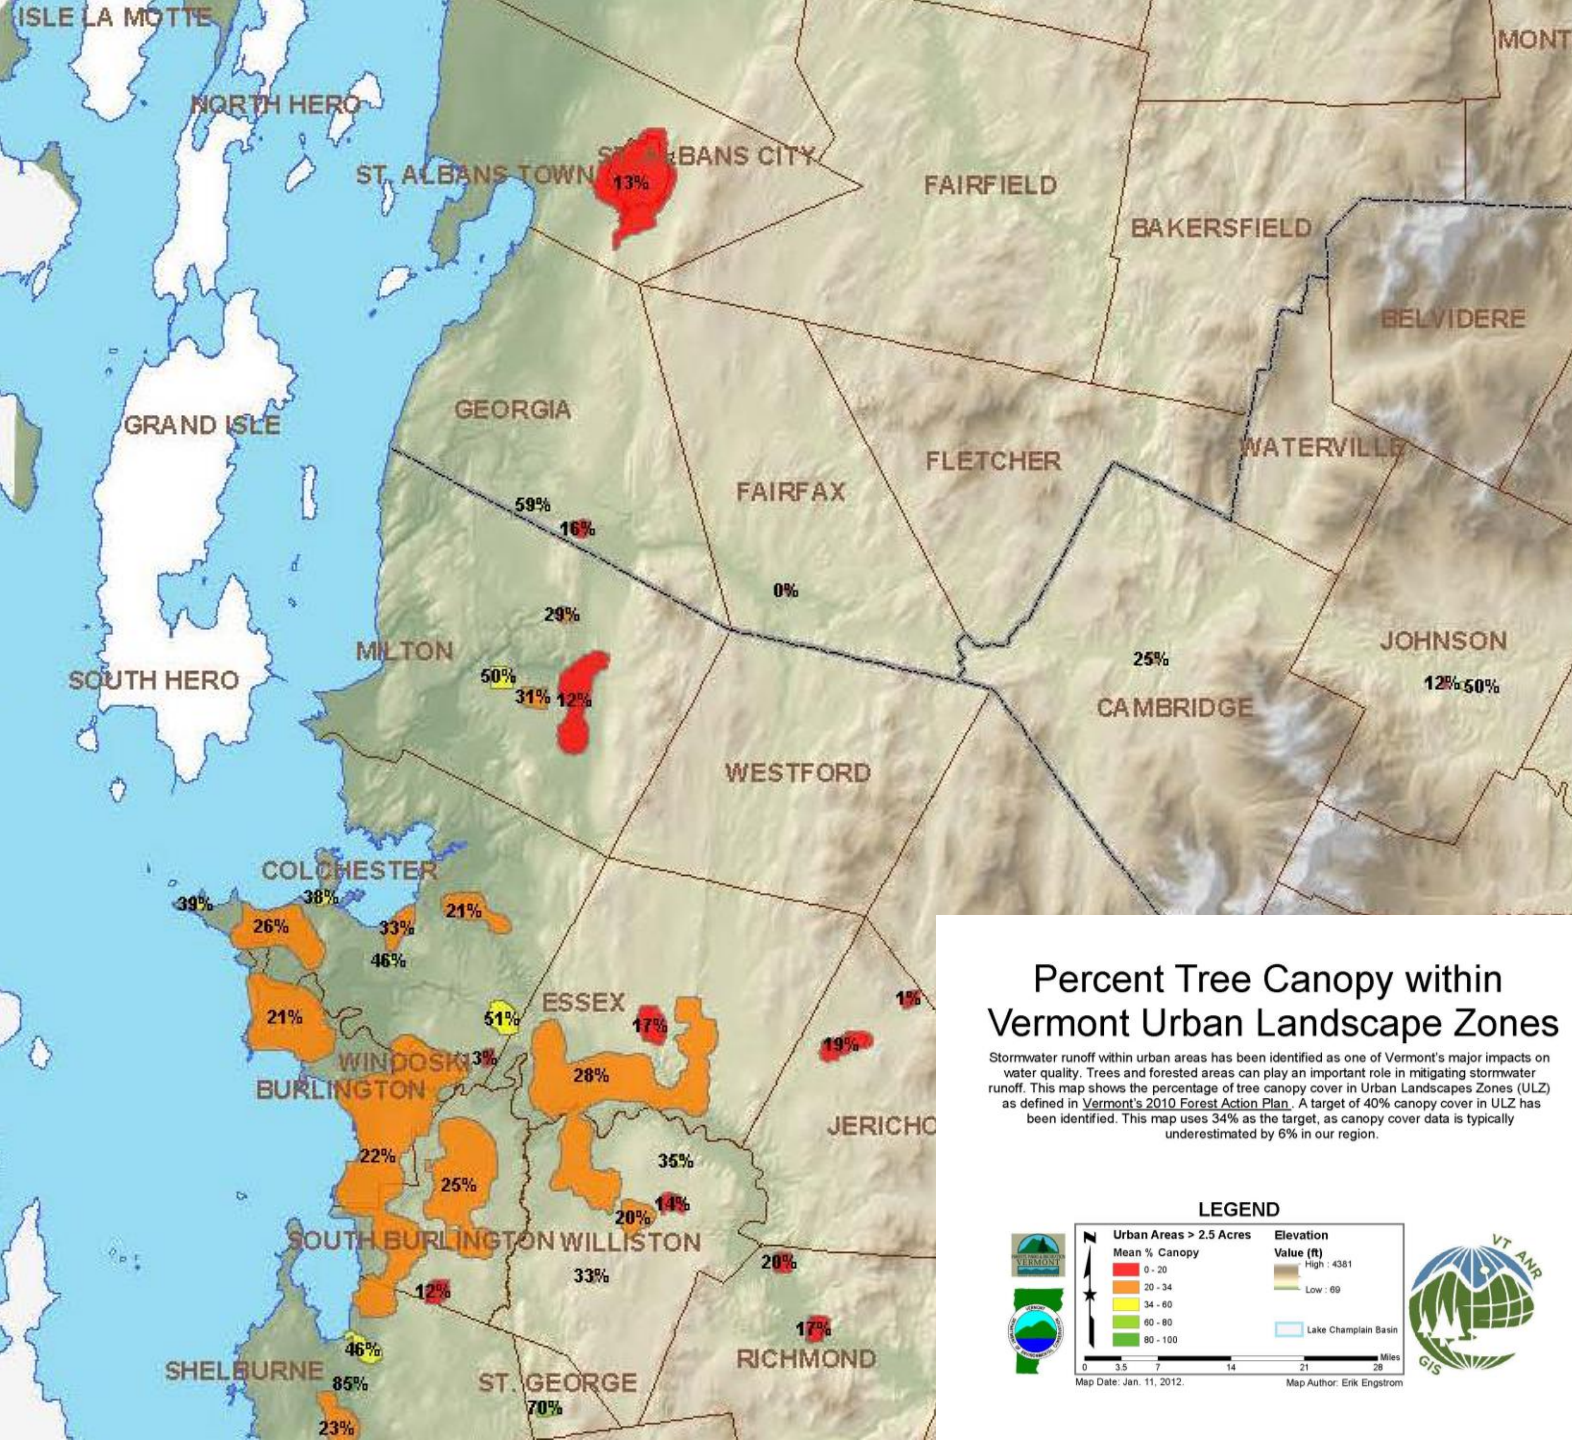

What is urban?

- ~ 3% of U.S. land area is considered “urban area”
- ~ 80% of U.S. population lives in an urban area
- 12% growth in U.S. urban area population between 2000-2012

Vermont's Urban Forests

- Over 243,000 (38.9%) of Vermonters live within a defined Urban Area, described as having:
 - high population density
 - high impervious surface area
 - low tree canopy cover

- There are approximately 12 million urban trees in Vermont's downtowns that provide an average canopy cover of 31% of urban land area.

What does “urban and community forest stewardship” look like in Vermont?

9 Tree City USA Communities

- City of Burlington (28 years)
- Village of Essex Junction (7 years)
- Town of Hartford (19 years)
- Town of Middlebury (4 years)
- City of Montpelier (20 years)
 - City of Rutland (30 years)
- City of South Burlington (14 years)
- Town of Shelburne (5 years)
- City of Winooski (3 years)

Homegrown Help

In 2022:

- municipal volunteers provided 10,250 hours of work (that we know of!)
- over 100 communities are developing or managing an urban & community forestry program
- over 129 communities received UCF Assistance

Heat Vulnerability Index - Overview

Vermont Climate & Health Program

Overall Heat Vulnerability Index

Population

Socioeconomic

Environmental

Health

Acclimatization

Heat Emergency

Heat Vulnerability Report

The Vermont Heat Vulnerability Index draws together 17 different measures of vulnerability in 6 different themes: population, socioeconomic, health, environmental, climate, and heat illness. These measures are combined to measure the overall vulnerability of Vermont towns to heat-related events. This is a first step to identify populations that may be more vulnerable to extreme heat, however local knowledge should always be considered when it is available.

Heat Vulnerability Measures

Population Characteristics:

1. % population less than 5 years old
2. % population 65 years old or older

Socioeconomic Characteristics:

3. % population living below Federal Poverty Line
4. % adult population with no high school diploma
5. % adults 65 and older living alone
6. % adult population with no health insurance

Health Conditions:

7. % adults with diabetes
8. % adults with asthma
9. % adults with hypertension
10. % adults who are obese
11. % adults in fair or poor health
12. All-cause mortality, warm season deaths

Environmental Characteristics:

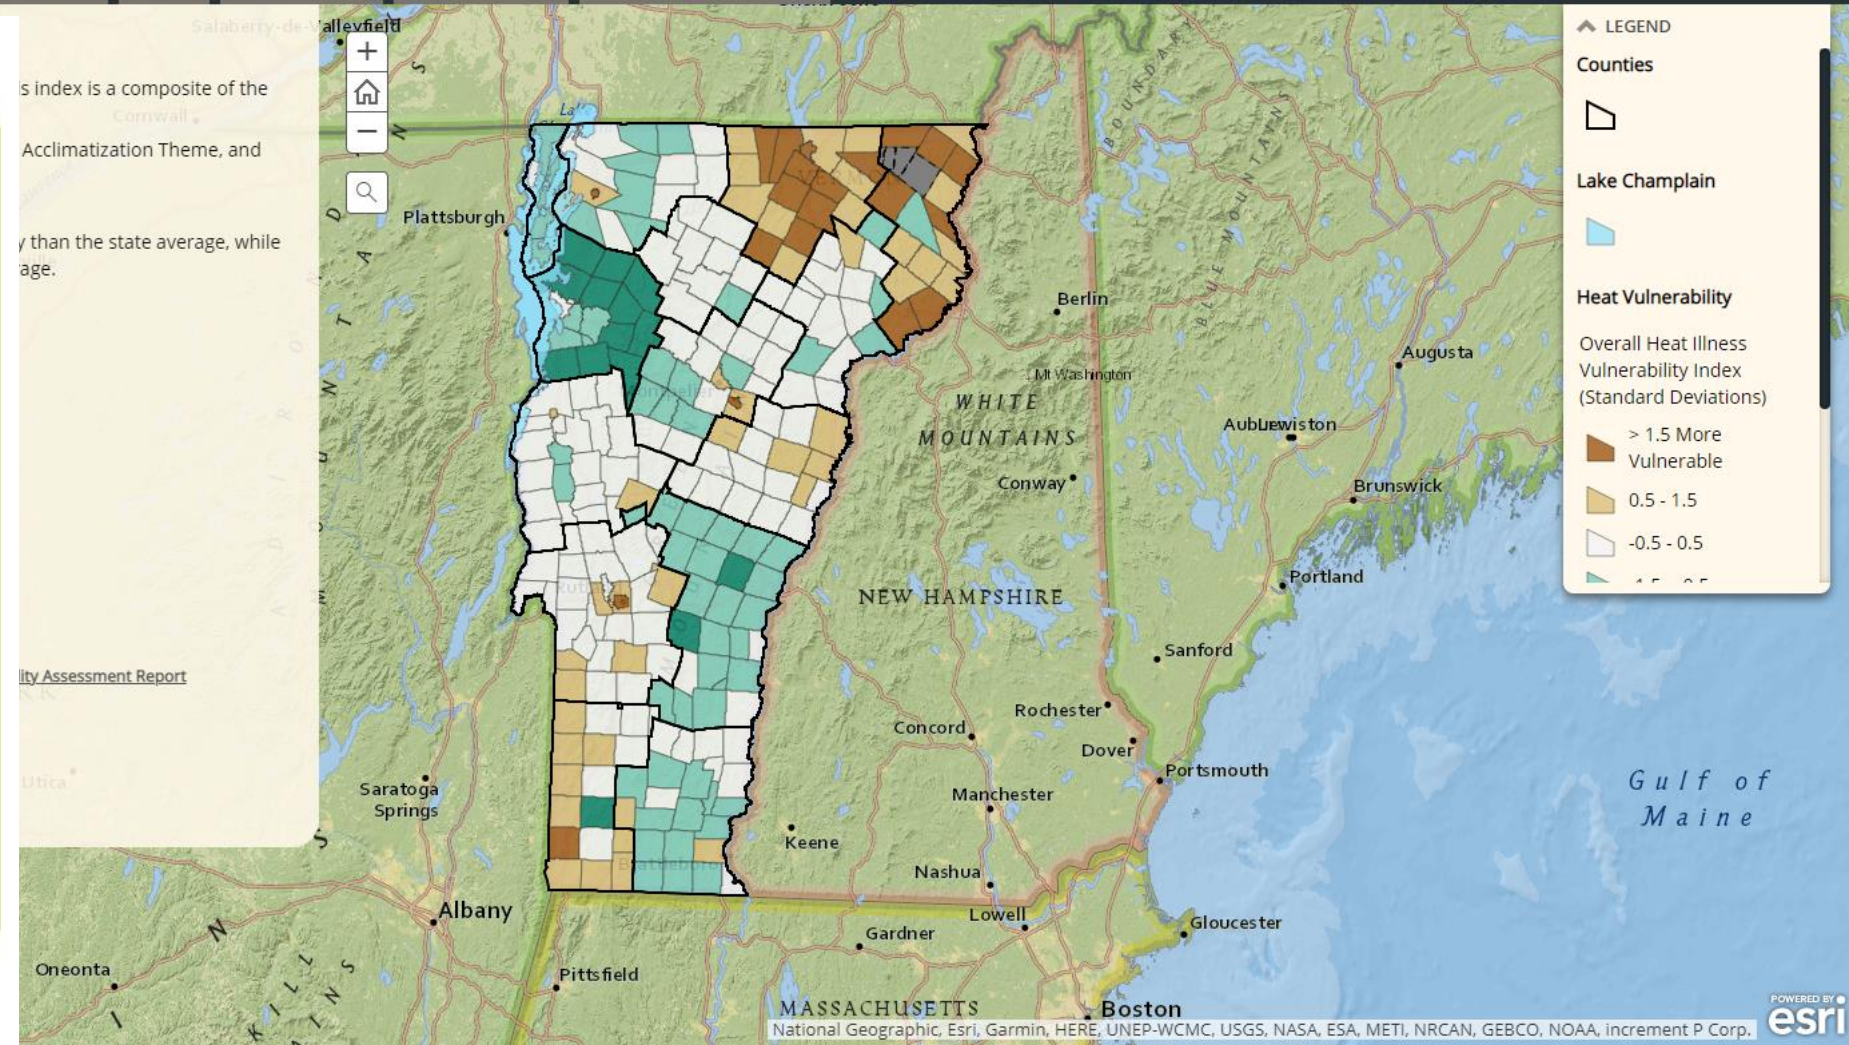

13. Housing units per square mile
14. % covered with impervious surface
15. % covered by forest canopy

Climate Characteristics:

16. Average number of days per year 87° F or hotter

Observed Heat Illness:

17. Heat-related emergency department visits

Tree Canopy Cover in Downtown Centers

Municipal Tree Inventory Tool

- First built in 2013 as part of a grant-funded initiative called Caring for the Urban Forest, VT UCF and ANR GIS built the tool utilizing ArcGIS Collector
- Twenty municipalities completed public tree inventories and a strategic tree management plan
- When the technology became available in 2017, nine towns received an Urban Tree Editor Tool, transitioning their inventory data from a snapshot in time to a live and manageable database
- In 2022, the tool needed an update to reflect user interests and new technology. ANR GIS promoted some of their newest technology to improve the utility of the tool and showcase powerful data filters.

Maintenance Inventory Complete!

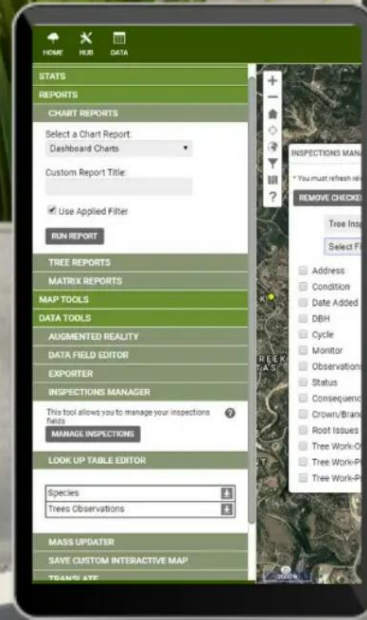

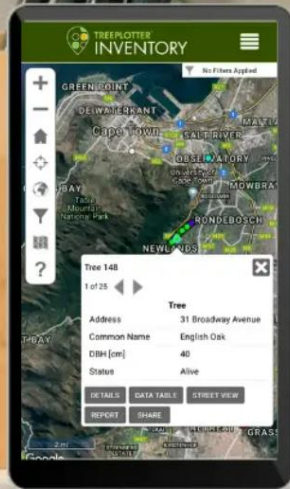

Municipal Tree Inventory Tool

- Over 24,000 data points entered by 34 municipalities and two non-profits.
- Data is entered by State of Vermont foresters, volunteers, summer interns, middle school, high school, college, and university students.
- University of Vermont undergraduate class NR 206 completed and analyzed inventory in two municipalities and in one mobile home park.
- Gets people outside, looking at trees, talking to locals, and observing their communities for hundreds (and hundreds) of hours.

About

Black ash trees are a cultural centerpiece for many native people in northeastern North America, including the Abenaki. Basket-tree harvesters identify and fell the trees, having been trained to identify the specific tree attributes that indicate basket quality black ash. The trees are then processed into splints which can be used for basketry, or a variety of other ...more ↓
