

Lean to at S. Shaver  
Sug < 20% but not repro  
B-BC dom  
little PB + Sab  
Canopy to 30

Mean browse on VA,  
Much \$, SM, CB  
BC repro browsed, but not the repro  
RS browsed  
No 1950 blowdown - no  
opportunity for for repro.

RM replace sub above lean to  
No for yet - 50% \$, little  
the repro DP first.  
BC DOM RM browsed

First bro under hwd grow  
2 1/2 yr.  
Older trees above hwd canopy  
only 2-3 yr.  
More B repro  
May started 2nd crop  
replaces first.

Are we restricted to  
repeat blowdown

sites?

Trail had split send  
F to 50% BA with some  
repro

Stands <sup>much</sup> denser

Blowdown near  
favoring  
fir repro:

Repro not common  
since 1950
