

Mt. Pisgah (Delaware Co.) 6/27/72

410-1

Ski Slope Clearing Invasion

YB, RM seedlings, RS, RA, Rumex aceto,
Solidago gram, rug, can; Fraxin u Poly comit
Anaphalis

Summit Vegetation

Canopy to 25ft.

BC dominates to ca. 40%

B ca. 20%

Sug ca. 20% with some repro.

Some MM,

Sorbus off summit.

No RM seen on top, but along slope

More young sugar than on Bearpen

Summit, but less CB.

\$ to 75% +

AA

SM abundant but

Poly cili

RA

VA

VV

OX

MC

CB infrequent

TB "

no LL seen

Di-cr.

Poly-ohio.

The swamp could not be cared as it might even post-date the ski center. No peat has collected under Sphagnum and bedrock is 2-4" beneath. Mostly VV - Carex brunn - Polypodium - Cinn fern
