from NY Bot. Garden

Dear Andrews Foray participant,

I'm sorry to be so slow in getting this information out to you. It took a while to get some of the determinations in added to the general busyness of the end of this year. Both Elmire and I look forward to seeing you next year. Bill Buck

Friday, 12 Sept 1980, High Falls Creek, Denning Twsp., Ulster Co., New York, 41°58'45"N., 74°31'15"W.

In addition to the species on the list at the foray the following were found:
Paraleucobryum longifolium
Brachythecium acutum
B. plumosum
Herzogiella striatella
Polytrichum pallidisetum
