

Trail from Summit to lean-to-along south spur. 260-30

Idea on advancing & retreating populations.

1999?  
no date

Fir dom. the Summit, while sub dom the nearby lean-to.  
Transition is gradual.

Advancing popln: mostly saplings, few mature

Retreating popln: few saplings, mature, dying & dead common

This transition looks stable, neither fir advancing nor retreating

One fir at about 12 ft up, broken off 9" diameter = 80 years.

Graham Mtn. from the <sup>SUB</sup> lean-to.
