Notes on veg along MBR trail from Alder Lake: ^{obs} 11/11/05 | Snowfall of 10/26/05

Snow patches from lean to area to ridge crest, not continuous except in open beaver meadow & Bog #319 where there was no crown intercept from 10/26/05 snowfall. (Also 10/22 snow).

A # of young beech, with lvs. on, fell over onto the trail from the heavy wet snow & caused blockages.

Dense beech cover from above Alder Lake all the way to the crest of MBR, local, but more present than absent.

Sprouts & saplings 5 to 20' high, mostly 10' to 15', and about as many years old. Could adversely affect SUB, B&YB repr.

Only the SUB cover, ^{steep} at about 2700' or 2800' is nearly beech-free.

Spring #1318 at Beaver Meadow Leanto

Water temp 46°F, air 66°F

" pH 4.9

" Oxygen 12.25 mg/L at 7.1°C

} These done in 2002 but NOT O₂.

[Is this a record max. for O₂?]

Calibration: 2600' air pressure 92.4 or 91% of sea-level.
